## **Paymill - innovative payment service provider launches**

The fastest way to accept credit card payments online

From today on Paymill starts an innovative payment solution for shops and online services. Paymill is based in Munich and enables its customer to offer credit card payments as quick as possible. Due to major and comparatively high costs, especially merchants of smaller shops could not offer payments via credit card.

Paymill finally will change that.

Founder and CEO of Paymill Mark Henkel says: Paymill enables every online business to accept credit card payments. Paymill offers fast integration, easy handling and price transparency.

### **The advantages of Paymill at a glance**

- Simple: Uncomplicated integration of credit card payments, full and individual integration in check-out-process
- Fast: Easy onboarding – live transactions possible within 48 hours
- Transparent: No setup costs, no monthly fix fees, as well as comprehensive customer service regarding all administrative and technical issues.

Initially, Paymill started with credit card payments in Germany only. Adding further common payment methods as well as entering international markets is already planned. The following online shops trust Paymill from day one: DieJeans.de, Tailory.com, Flakegolf.de and mywineportal.com.

Paymill GmbH was founded in Munich in June 2012 by Mark Henkel. The management team is complemented by Dr. Stefan Sambol and Jörg Sutara. Currently, Paymill has 15 employees, mainly with technical background.

For developers, founders, and web agencies, Paymill organizes launch events in Munich, Berlin, Hamburg and Cologne. Find further information under [www.paymill.de](http://www.paymill.de)
